

Your computer, working for you.

Alfred is a personal AI that runs locally, watches your workflow, automates the small stuff, and helps you focus on what matters.

Download for Mac

See How It Works

Less busywork. More deep work.

Four capabilities that make Alfred feel like a quiet, competent assistant.

Always-On Agent

Runs quietly in the background, watching your workflow and stepping in only when it matters.

Task Automation

Detects repetitive patterns and automates them — file moves, scheduling, formatting, follow-ups.

Behavioral Learning

Adapts to how you work over time. No cloud sync — your habits stay on your machine.

Productivity Insights

Clean, private dashboards showing where your time goes and how to reclaim it.

Three steps. Zero friction.

From install to autopilot in minutes.

01

Install Locally

One command. Runs on your machine — no cloud, no accounts, no data leaves your device.

02

Alfred Observes

Watches your patterns silently. Learns what you do, when, and how — then suggests automations.

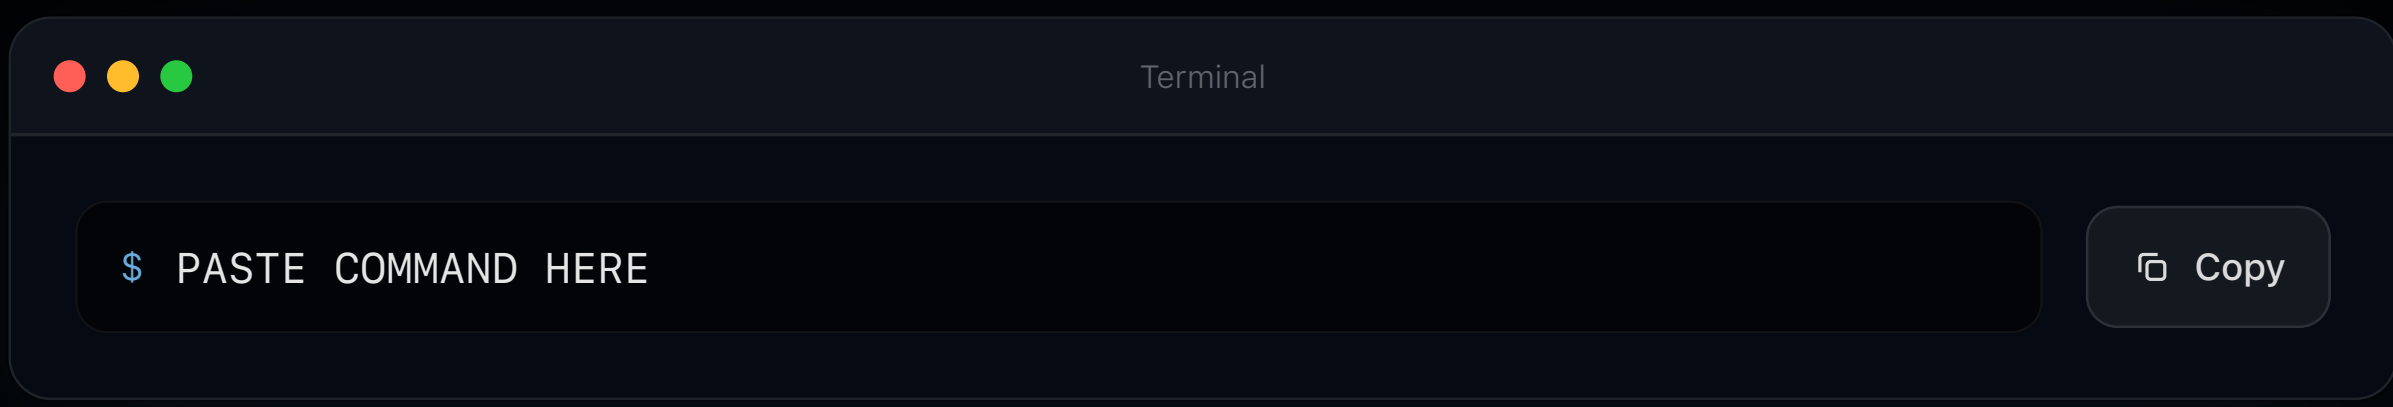

03

You Focus

Small tasks vanish. Repetitive work disappears. You spend time on what actually matters.

What are you waiting for? Your future self will thank you.
